Student visa: up to 48 hours per fortnight during semester, full-time during university breaks

SUMMARY

Master of Information Systems student at the University of Melbourne, currently interning as a junior cyber security engineer at AAKONSULT. Built a PCI DSS v4.0 payment page monitoring tool that now runs in production for a nonprofit client, alongside day-to-day Microsoft 365, firewall, backup and network support. Previously tested web applications for security flaws at Disney Star. Looking for part-time roles in security operations, GRC or IT support.

SKILLS

Security & compliance: PCI DSS v4.0, vulnerability assessment, web application penetration testing, static code analysis, dependency scanning, security headers (CSP, HSTS), change detection and alerting, audit logging

Security tools: Burp Suite, Fortify, Snyc, Wireshark, Autopsy, Aura Inspector

IT & cloud: Microsoft 365, Exchange Online, Windows Server, Azure, AWS, Cloudflare (Workers, WAF), firewalls, anti-spam filtering, backup and disaster recovery, networking (switching, routing, subnetting)

Scripting & tools: PowerShell, Python, TypeScript, JavaScript, SQL, Linux, Git, Jira, ServiceNow, Visio, Draw.io

EXPERIENCE

Junior Cyber Security Engineer / Junior IT Solutions Engineer (Intern)

Jul 2026 – Present

AAKONSULT Pty Ltd, Melbourne, VIC

- Built Browser Monitor, a payment page tamper-detection tool for PCI DSS v4.0 requirements 6.4.3 and 11.6.1. It runs weekly in production on a nonprofit client's live donation pages to catch Magecart-style card skimming.
- Each scan loads the page in headless Chrome (Puppeteer), SHA-256 hashes every script, inline event handler and security header (CSP, HSTS), and compares them against an approved baseline. Tag manager and analytics scripts are matched by URL and ID, and per-visit nonces are stripped, to reduce false alerts.
- Set up alerting and an audit trail: alerts go to the internal team or the client based on who owns the change, approvals need a named reviewer and second confirmation, and every decision is logged with CSV export.
- Built the admin dashboard for monitored pages, alert recipients, scan history and pending approvals, with passwordless one-time-code sign-in (HMAC-hashed codes and sessions, rate limits, __Host- cookies, cross-site request blocking). Stack: TypeScript, Cloudflare Workers, D1, KV, WAF.
- Tested the company's Salesforce-based SaaS product (Payments2Us) for client-side vulnerabilities, using Aura Inspector to find exposed data objects and insecure Aura component endpoints.
- Supported security operations across client environments, including firewall management, anti-spam filtering and backup and disaster recovery configuration.
- Administered Exchange Online and Microsoft 365 through PowerShell, including bulk mailbox archive setup, and troubleshooted connectivity issues on Linux systems.
- Worked with the senior systems and network administrator on client networking, switching and routing issues, helped support Azure and AWS environments, and documented setups in Visio and Draw.io.

Application Security Testing & Vulnerability Assessment Intern

Jun 2024 – Oct 2024

Disney Star (The Walt Disney Company), Mumbai, India

- Carried out 15+ vulnerability assessments and penetration tests on internal web and software applications, finding critical security flaws and contributing to a 40% reduction in exploitable vulnerabilities.
- Used Burp Suite for web testing, Fortify for static code analysis and Snyc for dependency scanning to find injection flaws, misconfigurations and insecure dependencies.
- Prioritised critical findings and tracked remediation with development teams in Jira and Microsoft Teams.

Service & Quality Assurance Intern

Jan 2023 – Apr 2023

LTIMindtree (Larsen & Toubro Infotech Mindtree), Remote

- Categorised and prioritised 2,000+ service tickets a month across several client accounts, helping cut average resolution time by 25% and improve SLA adherence.
- Supported IT troubleshooting for client accounts alongside ticket management, using Microsoft 365 tools.

PROJECTS

- **CAN Bus Security Analysis:** Simulated a vehicle Controller Area Network (CAN) bus, demonstrated denial-of-service and replay attacks, and built tools to monitor and manipulate CAN traffic.
- **Custom Android ROM Development:** Compiled Android ROMs from AOSP source on Linux, including build environment setup, dependency management, kernel configuration and fixing build errors across a large codebase.
- **LawGIC-AI:** An AI tool that answers legal questions using India's 2023 criminal law codes (BNS, BNSS and BSA) and cites the relevant sections.

EDUCATION

Master of Information Systems <i>University of Melbourne, Melbourne, VIC</i>	Mar 2026 – Dec 2027 (expected)
B.Tech in Computer Engineering (Degree + Diploma) <i>NMIMS Mukesh Patel School of Technology Management & Engineering, Mumbai, India</i>	Jul 2019 – Jun 2025 <i>CGPA 3.47/4</i>
